

HYPOTHETICAL INVESTMENT PORTFOLIO ■ 1,00,000

Constructed & Analysed: May 2025

This portfolio is constructed for a **moderate-risk Indian retail investor** with a 2–3 year investment horizon, looking to grow ■1,00,000 (one lakh rupees) across asset classes. The strategy blends stability (large-cap blue-chips and ETFs) with growth (mid-cap stocks) and a small speculative kicker (cryptocurrency), resulting in a well-diversified, multi-asset portfolio.

The core principle is the **Core-Satellite approach**: 60% in a stable core (ETFs + large-caps) and 40% in growth/satellite positions (mid-caps + crypto). This ensures the portfolio benefits from market growth while containing downside through diversification.

Hypothetical Portfolio Allocation | ₹1,00,000

Large-Cap Stocks — ₹35,000	Cryptocurrency — ₹20,000
Mid-Cap Stocks — ₹15,000	Cash / Liquid — ₹5,000
ETFs / Index Funds — ₹25,000	

Fig. 1 – Donut chart showing allocation of █1,00,000 across five buckets.

Category	Amount (█)	Allocation %	Investment Rationale
Large-Cap Stocks	█35,000	35%	Stability, dividends, market-leading franchises
ETFs / Index Funds	█25,000	25%	Low cost, diversification, passive market returns
Mid-Cap Stocks	█15,000	15%	Higher growth potential with moderate risk
Cryptocurrency	█20,000	20%	High-return speculative allocation; BTC-heavy
Cash / Liquid	█5,000	5%	Emergency buffer + opportunistic re-entry reserves
TOTAL	█1,00,000	100%	—

3.1 Large-Cap Stocks (■35,000 — 35%)

Fig. 2 – Equity holdings breakdown within the ■35,000 large-cap allocation.

Stock	NSE Symbol	Amount	% of Total	Why This Stock?
Reliance Industries	RELIANCE	■8,000	8%	
Infosys	INFY	■9,000	9%	
HDFC Bank	HDFCBANK	■8,000	8%	India's best-run private bank; retail credit growth + R recovery.
Tata Motors	TATAMOTORS	■7,000	7%	JLR turnaround + EV push (Tata.ev); exports growth story.
SBI (State Bank)	SBIN	■8,000	8%	

Conglomerate: Telecom, Retail, New Energy. Long-term compounding

IT bellwether with strong USD revenue buybacks, and AI services pivot

PSU bank with improving asset quality, low valuation, and dividend.

ETF / Fund	Symbol / AMC	Amount	% of Total	Rationale
Nifty 50 ETF	NIFTYBEES (Nippon)	■10,000	10%	
Nifty Next 50 ETF	JUNIORBEES (Nippon)	■8,000	8%	
Gold BeES ETF	GOLDBEES	■7,000	7%	

3.2 ETFs / Index Funds (■25,000 — 25%)

Broad market exposure, lowest cost, tracks Nifty 50 index.

Next 50 large caps — more growth vs Nifty 50 at low cost.

Gold as inflation hedge and safe haven in volatile markets.

Stock	Symbol	Amount	Thesis
Dixon Technologies	DIXON	■8,000	
Polycab India	POLYCAB	■7,000	Wires & cables leader; infra capex + real estate boom tailwind.

3.3 Mid-Cap Stocks (■15,000 — 15%)

Electronics PLI beneficiary; Apple supply chain play; strong order book.

3.4 Cryptocurrency (■20,000 — 20%)

Given the high-risk nature of crypto, this allocation is capped at 20%. The holdings are: **Bitcoin (BTC)** — ■12,000 (12%): Highest conviction position; benefiting from spot ETF demand and halving supply dynamics. **Ethereum (ETH)** — ■5,000 (5%): Smart-contract infrastructure play; staking yield of ~3.8% APY. **Solana (SOL)** — ■3,000 (3%): Small speculative bet on the fastest-growing L1 ecosystem.

Fig. 3 – 12-month projected portfolio value under three return scenarios.

Scenario	Expected Return	End Value (₹)	Drivers
----------	-----------------	---------------	---------

Conservative	8% p.a.	■1,08,300	ETF + dividend stocks perform; crypto flat; gold : +10%
Moderate	14% p.a.	■1,14,900	Nifty rallies 12%; blue chips outperform; BTC +30%
Aggressive	22% p.a.	■1,22,400	Mid-caps run 25%+; crypto doubles; IT sector re rates

Risk Factor	Mitigation Strategy
Market/Systemic Risk	ETF allocation provides passive diversification; rebalance semi-annually
Concentration Risk	No single stock exceeds 9% of portfolio; 5 sectors represented

Crypto Volatility	Crypto capped at 20%; stop-loss at -30% drawdown triggers review
Currency Risk	Minimal; all positions in INR-denominated instruments or BTC (INR pairs)
Liquidity Risk	5% cash buffer; all holdings in highly liquid exchange-listed instruments
Inflation Risk	Gold ETF (7%) provides inflation hedge; equity real returns beat inflation

The portfolio should be reviewed **every 6 months** (November 2025 and May 2026). Rebalancing is triggered if any asset class drifts more than $\pm 5\%$ from its target weight. Profits from overweight positions are trimmed and reinvested into underweight buckets.

Stop-loss discipline: If any individual stock falls more than **25%** from its purchase price, the position is reviewed for fundamental changes and may be exited. Crypto stop-loss is set at **30% per asset** from entry.

7. Summary

This **₹1,00,000** portfolio offers a balanced approach for a first-time or intermediate Indian investor seeking wealth creation over a 2–3 year horizon. The Core-Satellite structure ensures that 60% of the capital is in stable, well-researched instruments while 40% participates in higher-growth opportunities. With disciplined rebalancing and risk management, the portfolio targets a moderate 12–15% annualised return with manageable volatility.
